

Every medal-winning stroke followed by millions of

eyeballs.

Made possible by

Fusion. It brought together CCTV.com, China's largest national TV network and the official online broadcaster of the 2008 Beijing Games, and over 1,000 massively scalable HP ProLiant servers, powered by Quad-Core AMD Opteron™ processors and running

Microsoft software. The result, streaming video enabling millions of Internet and mobile phone users to simultaneously cheer and follow their heroes without missing a thing. To learn more about Fusion at work, home, and play, visit fusion.amd.com
