

A data center that takes up less
real estate.

Made possible by

Fusion. It's the union of the extreme workload of America's largest and trusted online mortgage company, Quicken Loans, the virtualization power of VMware, the energy efficiency of HP ProLiant servers, all enabled by AMD Opteron™ processors.

That combination helped Quicken Loans to significantly reduce their server count and save serious square footage in their data center. To learn more about Fusion at work, home, and play, visit fusion.amd.com
